

Illinois's Opioid Settlements

The United States is in the **midst of a crisis** on its streets and in its communities as **overdoses, homelessness, and disorder reach record levels**. Yet settlement proceeds secured by the State of Illinois present an **unprecedented opportunity for generational investment** in treatment capacity for chronic substance abuse (CSA) and severe mental illness (SMI).

Illinois is set to receive **more than \$1.5 billion** (\$1,643,116,576.86) in opioid settlement funds—equal to nearly one-fifth of the state's share of the monumental Tobacco Master Settlement Agreement.¹ With twenty-one separate settlements and with payments spread out over decades, the funds are **at risk of being squandered** through ad-hoc allocations to **diffuse and disorganized efforts**.

The state must ensure that this opportunity for treatment investment is not underutilized. **Illinois can make targeted investments in treatment capacity** that will **honor those who suffered** in the opioid crisis and **ensure accessible care** for decades to come.

Illinois reserves 75 percent of funds (\$1,143,774,924.36) for use by the state with the remainder allocated to subdivisions.¹ The state's share is split: the Attorney General controls 20 percent of total funds while 55 percent of total funds are placed into a remediation fund. The remediation fund is under the control of a seven-seat steering committee which makes final allocation decisions.^{2 3}

The committee is misallocating funds and should be abolished. For example, \$15 million was allocated for community outreach and recovery support services, with one subrecipient focusing on services to “respect for the diversity of those living with or affected by HIV/AIDS.”⁴ As is the case in many states, the opioid settlement funds are being used as a slush fund to fulfill wish lists.

The state must rein in the misallocation of these funds by **placing control of funds in the hands of the legislature** and prioritizing investments in comprehensive treatment networks.

¹ With the exception of the McKinsey and Publicis settlements, in which the state controls 100 percent of funds. The Endo bankruptcy proceeds are allocated: 12 percent to the state, 55 percent to the remediation fund, eight percent to Chicago, and the remaining 25 percent to the other subdivisions.

Three priorities (Certified Community Behavioral Health Clinics, secure psychiatric beds, and community SMI/CSA response) **will ensure these funds have the largest impact** on Illinois.

Certified Community Behavioral Health Clinics (CCBHCs)

CCBHCs, designed to ensure access to coordinated comprehensive behavioral health care, have stable funding and supported are by all recent presidential administrations. CCBHCs are a key response to the opioid crisis and can augment other services such as police crisis response teams, homelessness outreach and services, and outpatient psychiatric commitment services.

- **Solution: Fund the development and expansion of CCBHCs.**
 - o Expand the CCBHC footprint with an emphasis on a team-based approach to co-occurring disorders.
 - o Create a stepped approach to SMI/CSA treatment with services provided by the CCBHCs.
 - o Require CCBHCs to offer specific care pathways to meet the needs of individuals with co-occurring disorders.

State Psychiatric Hospitals

Inpatient beds in secure facilities are critical for serving the highest-acuity psychiatric patients. Illinois currently has only **6.2 state psychiatric beds** per 100,000 people available for civil (i.e., non-criminal) patients.^{5 6} Treatment Advocacy Center recommends a rate of 30-60 beds per 100,000. Even counting non-public secure psychiatric beds, Illinois still falls short of the minimum.⁷ Secure beds are a costly but necessary expenditure to protect patients with severe psychiatric disorders and the public at large.

- **Solution: Fund the expansion of civil psychiatric beds.**
 - o Invest in expanding state hospital capacity.
 - o Move forensic (criminal) commitments to a jail-based restoration facility.
 - o Apply for one of several Section 1115(a) waivers to expand Medicaid reimbursement for institutions for mental diseases (IMDs).

Inpatient Stabilization Centers and Mobile Crisis Teams

Emergency departments (EDs) are supposed to be a last resort for times of true emergencies, but are increasingly used for all types of immediate-need medical care. This is especially true for low- to medium-acuity mental health crises. In order for CCBHCs and state psychiatric bed expansions to have the largest impact, there must be an immediate triage of low-acuity patients from higher-need patients, or else investments in these facilities will be drowned out,

overburdened, and underutilized by those that need them most, just like emergency departments.

- **Solution: Fund community-based mental health response resources.**
 - Expand community-based recovery centers, including voluntary short-term respite housing, especially for young adults.
 - Leverage CCBHC resources to develop comprehensive mobile crisis response teams in conjunction with police crisis intervention teams (CIT).
 - Support integration of community resources with crisis networks such as the Lifeline to support those in need or provide guidance for concerned loved ones.
